

Leak Detection Systems

As one of the UK's leading BMS Controls Companies with a global capacity for remote systems management, Alpha Air offers its client a uniquely bespoke service.

Industrial, Office & Retail Integration

The system is capable of monitoring a wide range of substances, including HFCs, Gases, Water, Petrochemical, and CO₂ in a single integrated system.

It can be customised to meet each client's individual requirements and adapted for all types of applications. It can also accept the addition of an automatic pump down facility, for equipment supplied from all major manufacturers.

Active On-Line Real Time Management

- * Head End monitoring software (see diagram above)
- * Up to 1000 sensors on the standard configuration (capable of further extension).
- * Full Interface pump down control for all major Air Conditioning manufacturers (Including Daikin, Mitsubishi, Toshiba, Panasonic, Hitachi)
- * Easy set-up with pre-warning levels with instant email alerts
- * Full data availability for system management and cost reduction

Features

- * Annual test reminders for each detector—based on hours of operation
- * Ability to consolidate multiple locations
- * Minimise downtime
- * Comprehensive reports on demand
- * Complete controllability—with graphic display and real time data
- * Advanced small leak detection: HFCs, Gases, CO₂, H₂O, Petrochemical.

Easy Installation

Easy to configure Software, with full system support and training.

Simple, straightforward wiring.

Valve kits sourced locally.

Works with most makes of analogue sensors.
